

Complete Skid Solutions From Fulton

Fulton manufactured a complete boiler room skid for a northeast college facility. The fully skidded system included three 30 hp low emissions boilers, quadplex return system, blow off separator, and all of the water treatment systems. Skid mounting was requested by the contractor to meet an aggressive construction schedule. This system will supply steam for sterilization and cage washing operations. Fulton was chosen because of our ability to completely skid mount the boiler room components at a competitive price.
