This FT-0400C 4,000,000 BTU/Hr natural gas fired thermal fluid heater is used to provide 600°F thermal fluid for a food processing application. The heater panel is equipped with a linkageless control system, panel box air conditioner and flanged combustion air inlet. The flanged air inlet is supplied when the customer ducts in the outside air for combustion. This package includes skid mounted redundant pumps as well as a pneumatic bypass valve and four 2-way control valves. The FT-1000L deaerator/thermal buffer/expansion tank is supplied loose for customer mounting.
